

# Access to Integrated D-SNP Products

Year-over-Year Changes, 2021 – 2022

*This work was made possible through funding by Arnold Ventures and is part of a larger effort to illuminate issues and opportunities related to Medicare–Medicaid integration.*

# About This Chartbook

## Purpose

Quantify access to integrated dual-eligible special needs plans (D-SNPs)\* among dual-eligible beneficiaries and year-over-year changes in this access

## Data Sources

2021 Master Beneficiary Summary File; CY2021 and CY2022 of D-SNP Integration Status data; CY2021Q2 and CY2022Q1 plan benefit files from CMS

# Background Information on Types of D-SNPs

*Following the passage and implementation of the Bipartisan Budget Act (BBA) of 2018, three types of D-SNPs exist. Classification is based primarily on the amount of Medicaid risk the D-SNP organization bears, with integration generally increasing as Medicaid risk increases*

## D-SNP does not bear Medicaid risk\*

### CO-D-SNP

- Organization must notify state or designee when a defined subset of full duals are admitted to a hospital or skilled nursing facility (SNF), using a process defined by the state

## D-SNP bears Medicaid risk

### HIDE-SNP

- Parent organization has a contract for capitated Medicaid Long-Term Services and Supports (LTSS) and/or Behavioral Health (BH) in the state
- May include non-comprehensive Medicaid contracts (e.g., prepaid inpatient health plans, or PIHPs)

### FIDE-SNP\*

- Parent organization has a contract inclusive of Medicaid LTSS and BH consistent with state policy and is under the same legal entity as the D-SNP
- Must include 180 nursing facility days per year

\*D-SNP might bear Medicaid risk for physical health, but integration risk-bearing requirements are based on LTSS and BH risk.

# Summary: Dual Eligible Individuals' Access to Integrated Plans

*D-SNP access varies by county, and a dual eligible individual's access to integrated care depends on the degree of integration of D-SNPs in their county*

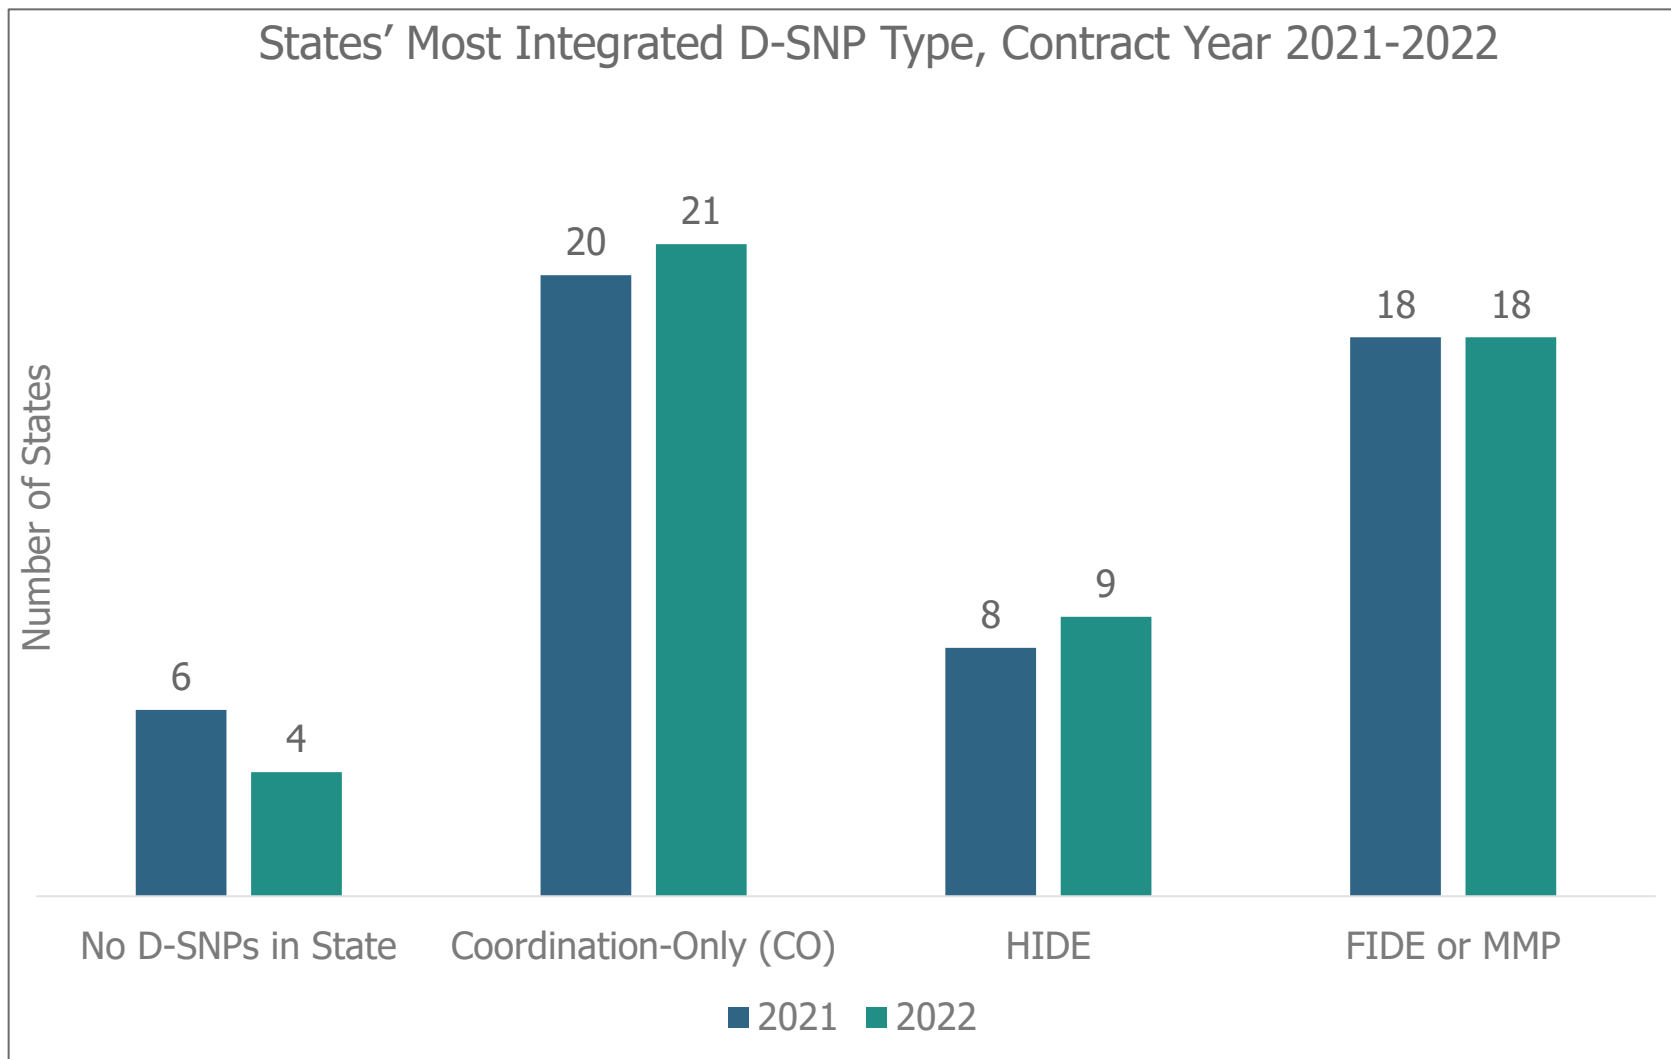

*Note:* Percent of total dual beneficiaries in the year is based on the most integrated D-SNP available for that contract year in each county. For both years, county dual beneficiaries were based on Medicare beneficiaries' residence and Medicaid status as of 3/31/2021 and includes full and partial dual individuals.

# Plan Trends

# All D-SNP Types Grew from 2021 to 2022

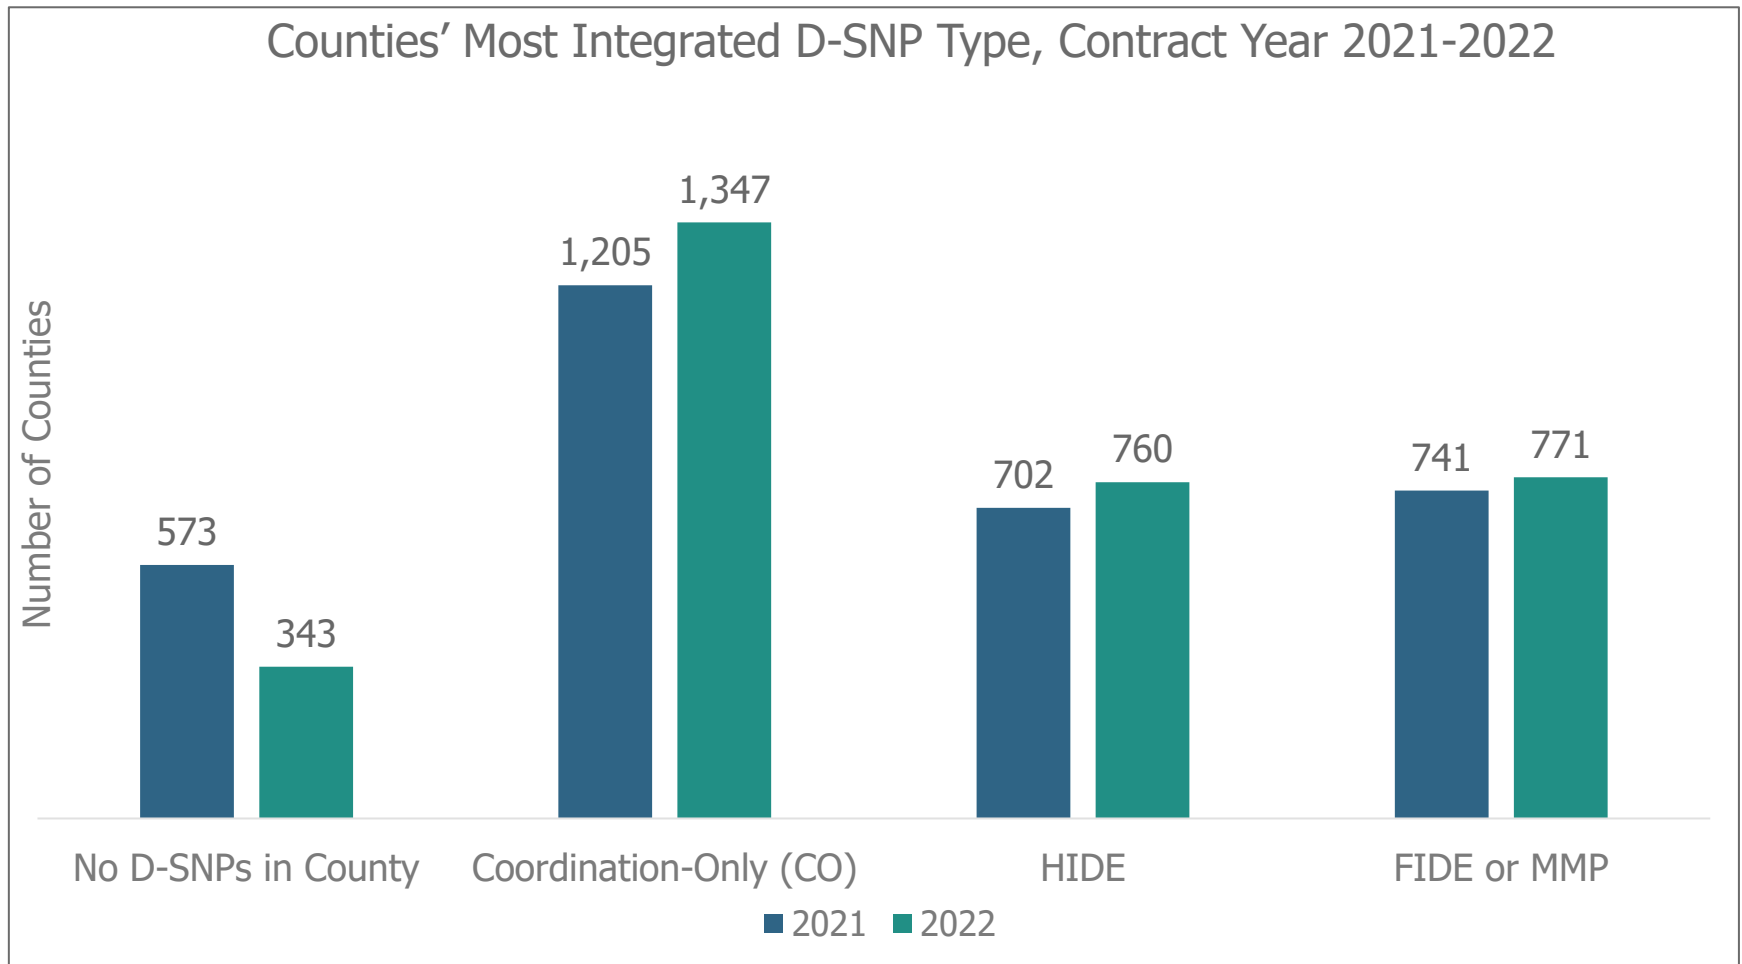

# Forty-Seven States Have a D-SNP Program in 2022

# Geographic Access

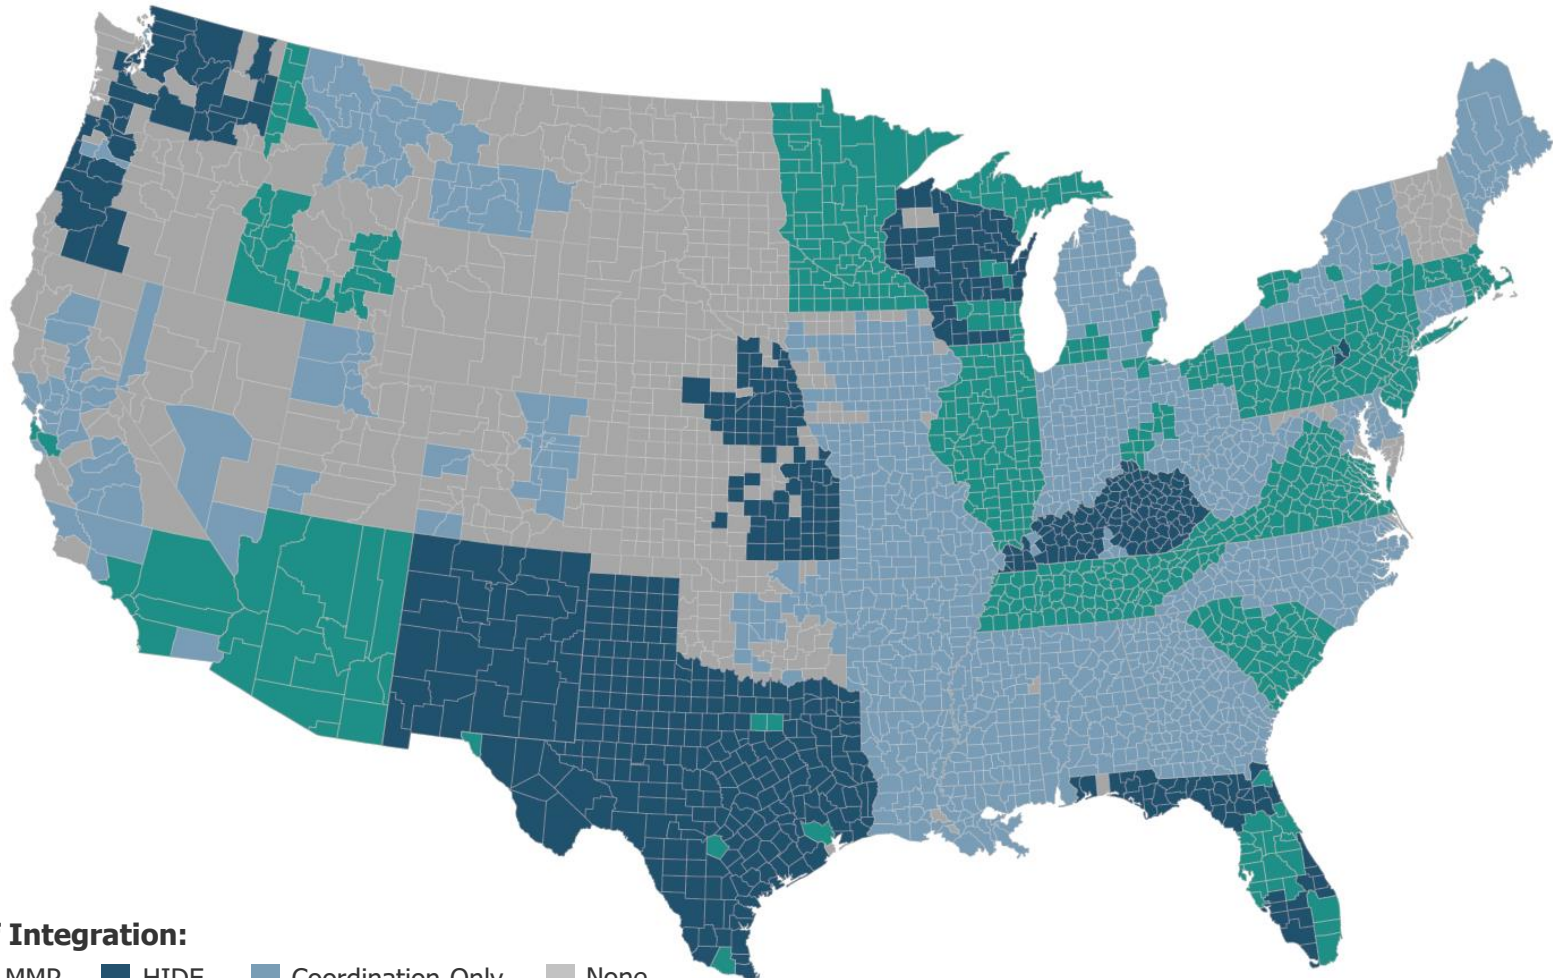

# More Integrated D-SNPs Available in Most Counties

*Note: We included plans even if CMS indicated their enrollment was frozen until Medicaid managed long-term care contract activation, reflecting DC and NY's redesigns of their managed care programs. We anticipate these plans will begin enrollment during the CY. Three counties in 2022 and twelve in 2021 are marked as having a higher degree of integration available than they would if we instead omitted plans with frozen Medicare enrollment.*

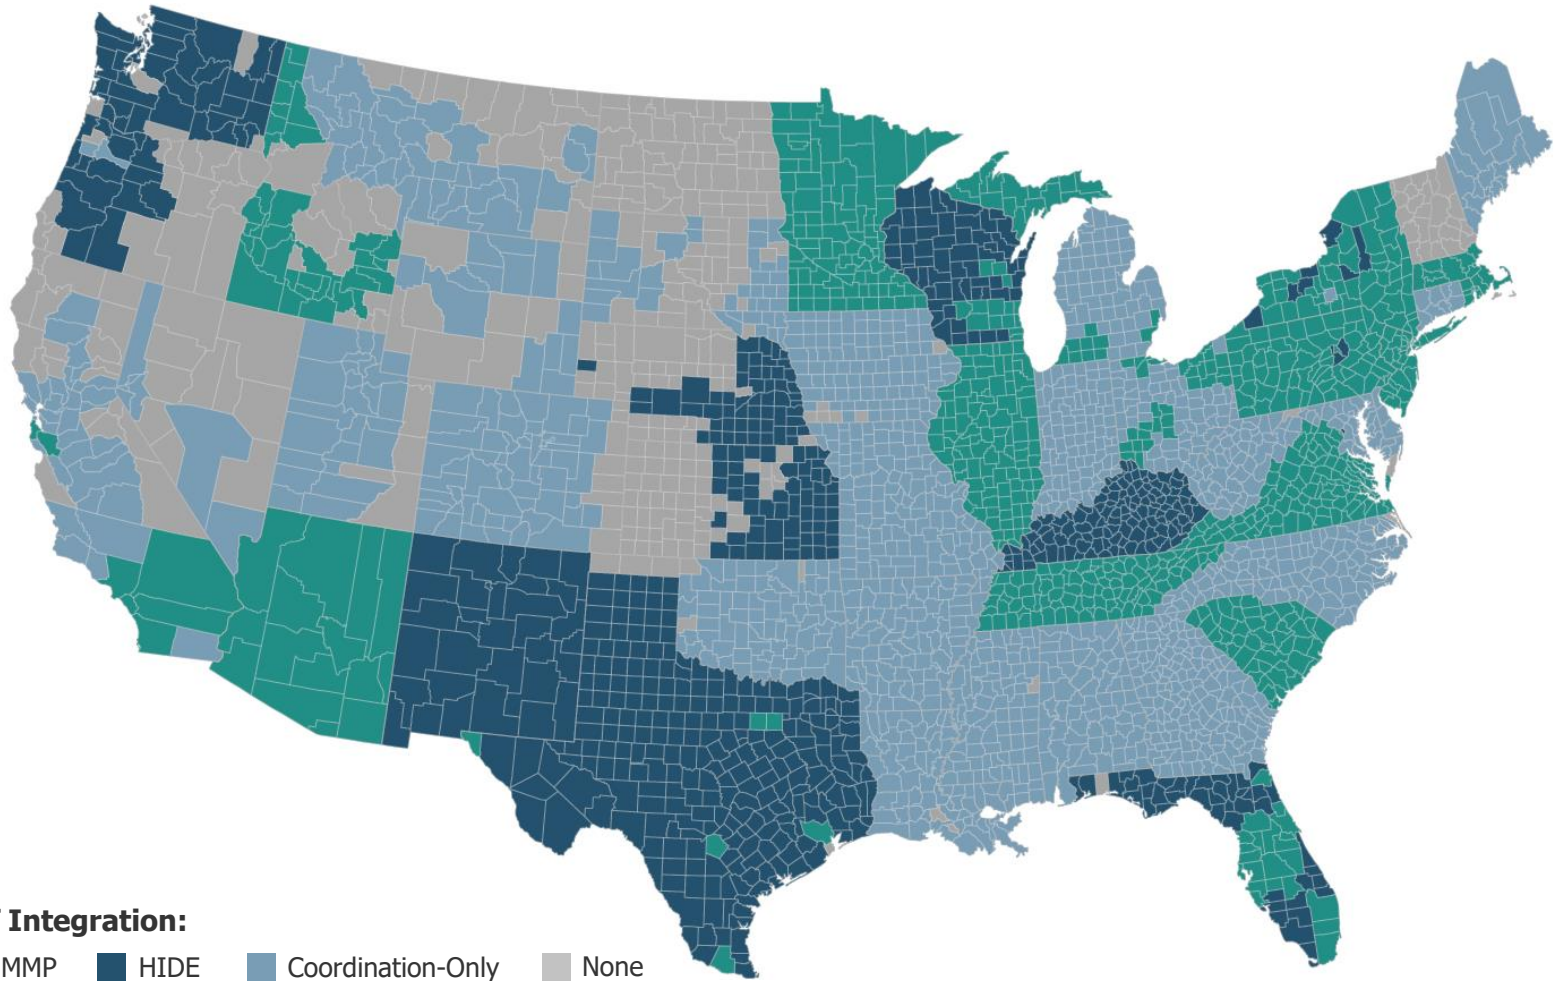

# Counties' Most Integrated D-SNP, Contract Year 2021

*Note: CMS indicated in February 2021 that enrollment was frozen for one or more FIDE-SNPs in 25 counties, all in NY, until Medicaid managed long-term care contract activation. In only 12 of these counties were these plans the only FIDE-SNPs:*

*Broome, Columbia, Delaware, Erie, Genesee, Greene, Monroe, Niagara, Onondaga, Orleans, Ulster, and Wyoming, all counties in NY.*

# Counties' Most Integrated D-SNP, Contract Year 2022

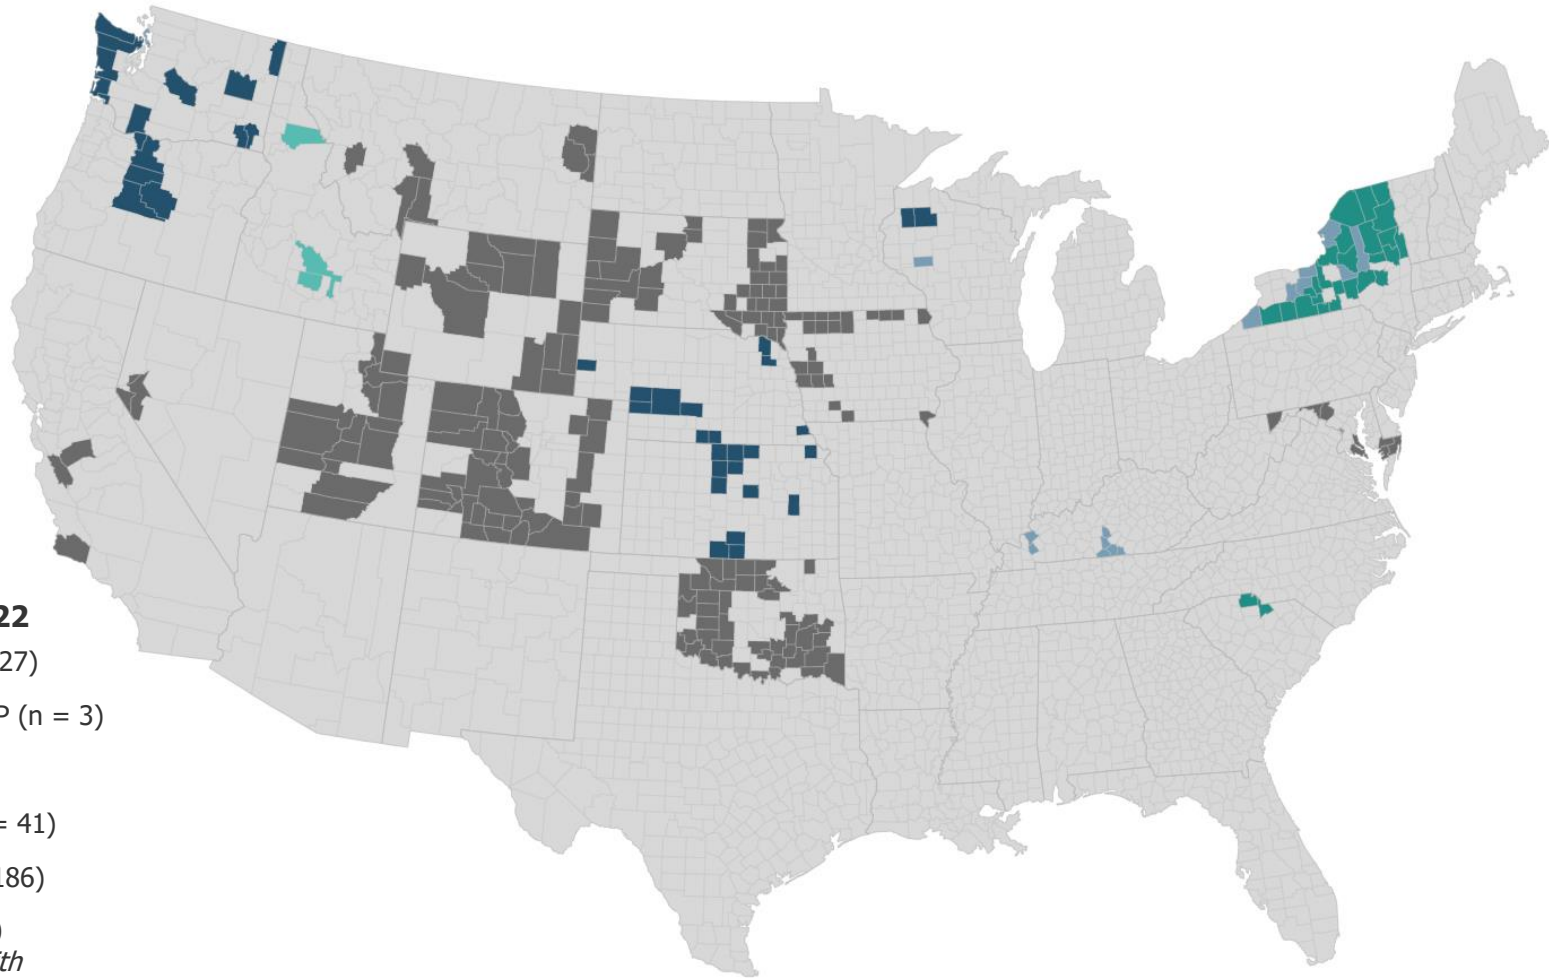

## Degree of Integration:

■ FIDE or MMP   ■ HIDE   ■ Coordination-Only   ■ None

*Note: CMS indicated that enrollment was frozen for one or more D-SNP in 30 counties, all in NY or DC, until Medicaid managed long-term care contract activation. We expect all plans will start enrollment in CY2022. Only 3 areas affected have no other D-SNPs with the same degree of integration for CY2022. Genesee County and Monroe County, in NY, have affected FIDE plans but have HIDE plans. DC has no D-SNP other than its affected HIDE plan.*

# Counties with Changes in Most Integrated D-SNP, Contract Year 2021-2022

- Change in Most Integrated Plan, 21-22**
- CO to FIDE/MMP (n = 27)
  - No D-SNP to FIDE/MMP (n = 3)
  - CO to HIDE (n = 17)
  - No D-SNP to HIDE (n = 41)
  - No D-SNP to CO (n = 186)
  - No change (n = 2,947)  
*(Includes counties with no D-SNP both years)*
